73%

## Projects

**Online Book Store**  
This was the first project that i build with java as server side language and JSP pages as front end, we have used the spring+ hibernates framework to create it. The aim for building this app was to get exposure of web developement.

**To Do List (mini project)**  
This app is created using flash microservices, with sqlite3 as database and was deployed on heroku server. The aim for building this was to get familiar with API's and Web deployment.

**Facility and Property Contract**  
This was the prebuild module that i worked on as a developer and enhanced various new complex features in it. The tech that i have worked here is Python, Javascript, mariadb, Jinja2 and frappe framework(ERP software).
